

Whether it flies or it walks, Chameleon RF™ has worked hand in-hand with Symbol Technologies to offer Symbol Data Collection Solutions on alternate Wireless Backbones.

The three Symbol devices shown on this page have found a home within a major airline carrier and boot manufacturer by fulfilling the users' need for Symbol Portable Data Collection Devices with alternate 802.11b radios.

The VT2400 (aka VRC6946), TR1200 (aka PDT6846), and WT2200 (aka WSS1046) terminals have been integrated seamlessly into the users' WLAN through the use of the Avaya and Cisco 802.11b radios.

## How did Symbol Benefit?

The users had already chosen an alternate infrastructure vendor, but wanted the form factor of a Symbol device utilizing an alternate vendor's radio. Chameleon RF™ worked hand in hand with Symbol to integrate an alternate 802.11b radio into the WSS10XX, PDT68XX, and VRC69XX, providing them with a Symbol Solution, keeping the Symbol relationship intact, and at the same time earning the Symbol Salespeople **COMMISSION!**

In a complex industry with limitless Wireless LAN choices, Chameleon RF™ is helping to keep things Symbol. Call us at 866.CHAMRF2 for more information.
